BALCONY · FAÇADE · PRIVACY SCREENING

VENTRA GLIDE & VENTRA FIXED

Sliding and fixed aluminium screen systems for balconies and façades — perforated, decorative and louvre infill options engineered for privacy, airflow, solar control and architectural expression.

Ventra Glide and Ventra Fixed are Perfmet's aluminium screen systems for balconies, façades and outdoor living areas — one shared family of perforated, decorative and louvre infill, built either into a sliding track for operable coverage or a static frame for permanent screening.

OPERABLE · SLIDING TRACK

Ventra Glide

A sliding aluminium-framed screening system: perforated metal, decorative or louvre panels mounted into single, dual or triple-track frames so coverage can be opened, closed or stacked to suit the moment — ideal where a balcony needs adjustable privacy, airflow or solar control.

STATIC · FIXED FRAME

Ventra Fixed

The same Ventra Perf, Decorative and Louvre infill built into a fixed, non-operable aluminium frame — for permanent balcony privacy, façade cladding and feature screening where a set-and-forget architectural finish is the priority over adjustability.

> *"Same screen system, two ways to use it — let it slide for adjustable coverage, or fix it in place for a permanent architectural finish."*

BALCONY & OUTDOOR LIVING

- Apartment & townhouse balconies
- Residential privacy screens
- Courtyards, terraces & walkways
- Window screening & sliding shutters

FAÇADE & FEATURE

- Façade feature screens & sun shading
- Commercial & retail cladding features
- Communal & public-space screening
- Custom laser-cut artwork panels

INFILL OPTIONS

- Ventra Perf — perforated aluminium
- Ventra Decorative — laser/router-cut design
- Ventra Louvre — fixed or operable blades
- Ventra Profile — folded 3D metal profile

SLIDING ALUMINIUM SCREEN SYSTEM

Ventra Glide

System type **SINGLE / DUAL / TRIPLE TRACK**

Ventra Glide is a sliding aluminium-framed screening system for balconies, façades and outdoor living areas. Perforated metal, decorative screen panels or louvre infills mount into sliding frames operated along a single, dual or triple-track arrangement — giving flexible privacy, solar control, wind moderation, ventilation and architectural expression in a durable, lightweight aluminium construction.

- Floor-mounted or top-hung configurations, with concealed commercial-grade rollers
- Single, double or triple-track systems for simple screening through to wide, high-coverage openings
- Integrated handles and panel stops, with optional locking and anti-lift systems
- Fixed or operable louvre blades within the same sliding frame
- Engineered for project-specific wind loads and panel sizes

TRACK	TYPICAL USE
Single	Simple balcony screening, privacy control, limited-depth applications
Dual	Greater opening flexibility, overlapping panel movement
Triple	Wider openings, larger façades, high coverage variation

INFILL OPTIONS

Louvre	Perf	Decorative	Profile
PRIVACY, AIRFLOW & SOLAR CONTROL	STANDARD VENTRA PERF PATTERNS	CUSTOM LASER / ROUTER-CUT DESIGN	FOLDED 3D METAL, FAÇADE DEPTH

BEST SUITED TO Apartment & townhouse balconies · Adjustable privacy & solar shading · Sliding external shutters & window screening

FIXED ALUMINIUM SCREEN SYSTEM

Ventra Fixed

Companion system **TO VENTRA GLIDE**

Ventra Fixed carries the same Ventra Perf, Decorative and Louvre infill as Ventra Glide, mounted into a static, non-operable aluminium frame rather than a sliding track. Where a project calls for a permanent architectural finish rather than day-to-day adjustability — a fixed balcony privacy screen, a feature façade panel, permanent sun shading — Fixed delivers the same durable, lightweight construction without the moving parts.

1. **Infill**
   Ventra Perf, Ventra Decorative or Ventra Louvre
2. **Frame & mounting**
   Face-fixed, soffit/floor mounted, or independent support framing
3. **Coverage**
   Full-height panels, feature bands, or façade-wide cladding runs
4. **Finish**
   Powder coat, anodised, or special/textured finish

FEATURE FAÇADE

Ventra Fixed perforated panels used as a full feature façade — Woolworths Inglewood's gold Ventra Perf cladding is fixed, not operable, chosen purely for its architectural presence.

PROJECT GALLERY

Ventra Decorative fixed panels integrated into balcony fronts — a permanent, laser-cut architectural finish repeated across every level.

Glide or Fixed — which one?

SYSTEM	OPERATION	INFILL	BEST SUITED TO
VENTRA GLIDE	Sliding — single, dual or triple track	Ventra Perf, Decorative, Louvre or Profile	Adjustable balcony privacy, solar control and ventilation on demand
VENTRA FIXED	Static — non-operable frame	Ventra Perf, Decorative or Louvre	Permanent screening, feature façades and cladding where adjustability isn't required

Powder Coat

Standard architectural finish for colour selection and durability — specify colour, gloss level and warranty grade to suit exposure.

Anodised

Durable metallic aluminium finish — specify anodised colour, thickness and exposure suitability.

Pre-Treatment

Corrosion protection before coating, selected for internal, external, coastal or industrial exposure.

Special Finish

Decorative colour, textured or project-specific finishes, subject to availability, lead time and supplier approval.

COMPLIANCE & ENGINEERING

Ventra Glide and Ventra Fixed should be reviewed against project-specific requirements — wind actions, fixings, material thickness, corrosion exposure and building interface conditions. Panel spans, frame sizes, roller capacity (Glide) and support structure are confirmed through project engineering. Where a screen forms part of a balustrade, fall-prevention or safety barrier, additional compliance requirements apply and must be assessed separately.

Every Ventra system is fabricated to project-specific shop drawings. Final compliance should always be confirmed by the project designer, engineer or certifier before fabrication and installation.

Ventra, installed

A selection of Ventra screen installations across residential, retail and commercial projects in Western Australia.

Woolworths Inglewood
Ventra Perf gold feature screen, fixed façade cladding.

Alocasia Apartments
Feature perforated outer curtain screen across balcony levels.

COEN Apartments
Ventra Decorative fixed panels integrated into balcony fronts.

Eden East Apartments
Feature screening alongside architectural planters and trellis.

Kiara College
Feature wall cladding and window screening.

Paradiso Apartments, Como
Balcony privacy screening across a multi-level façade.

150-152 Riseley Street
Custom laser-cut Ventra Decorative feature cladding, Booragoon.

304 Fitzgerald Street
Fixed screening integrated into a multi-storey façade.

Broome Golf Club
Feature screening to a regional clubhouse façade.

PERFMET VENTRA

Let's screen it right.

Every Ventra Glide and Ventra Fixed system is fabricated to site-measured, project-specific shop drawings — no fixed stock lengths, no off-the-shelf compromises.
